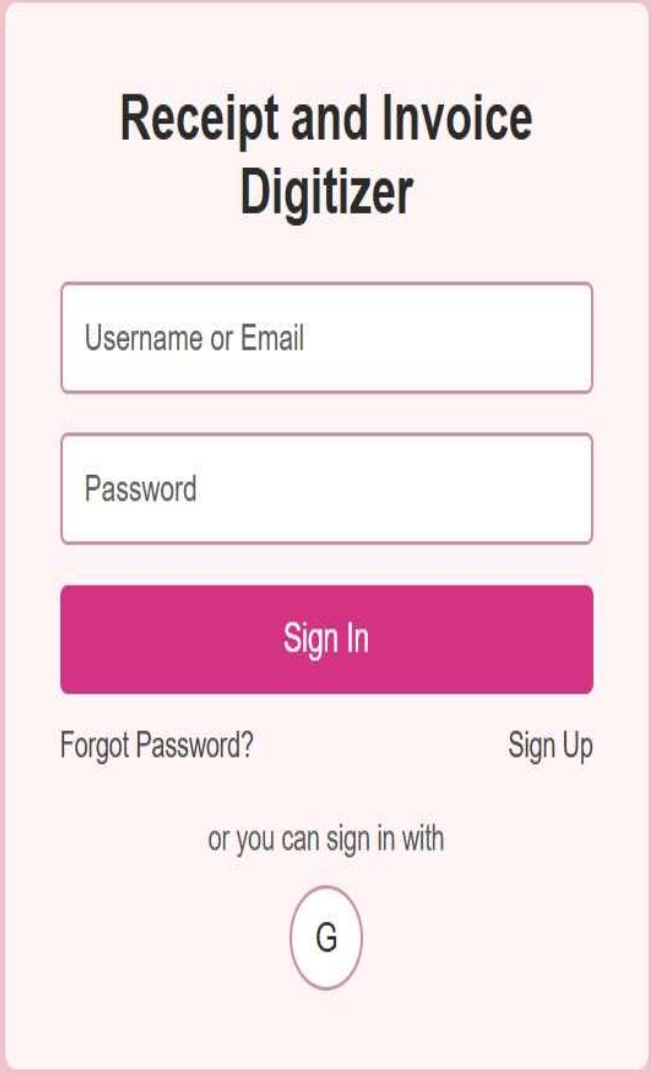
Receipt and Invoice Digitizer

My contribution- frontend development

(login page & forgot password)

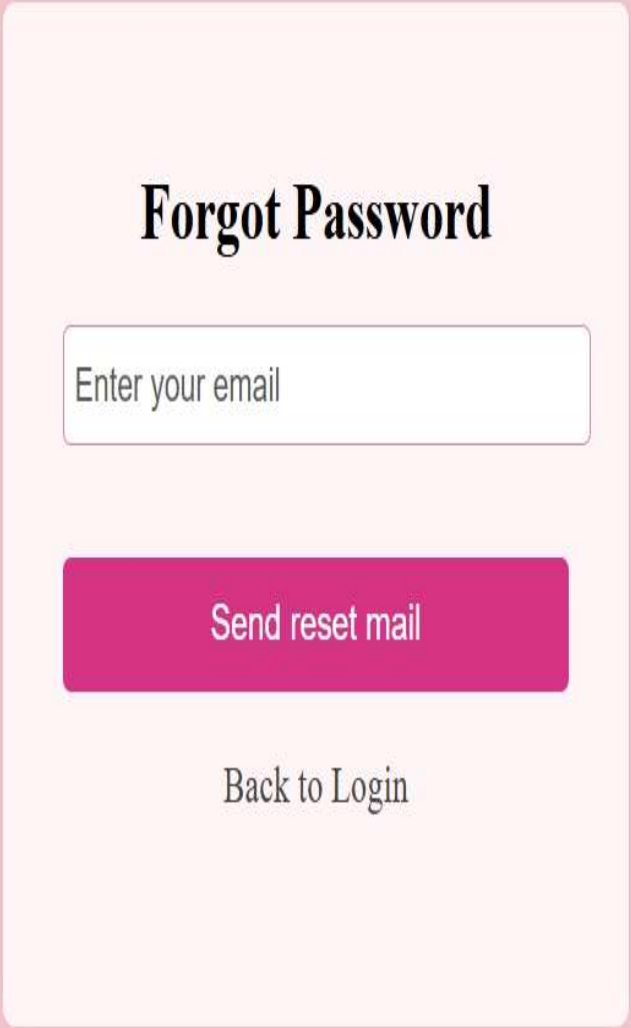
Technologies Used: HTML, CSS

- Designed and developed responsive user interfaces using HTML and CSS.
- Created a clean and user-friendly Login Page with proper input fields and layout.
- Designed the Forgot Password page to allow users to reset credentials easily.
- Used HTML to structure web pages and CSS for styling, alignment, and layout consistency.
- Ensured simple navigation and consistent design across authentication pages.



Login Page Design

- Username or Email field for user identification
- Password field for secure authentication
- Sign In button to access the application
- Forgot Password option for credential recovery
- Sign Up option for new user registration.



Forgot password Design

- The forgot password page has an email input field for verification.
- It provides an option to send a password reset email.
- A back-to-login option is included for easy navigation.

Login & Forgot Password Page – HTML implementation

- HTML was used to structure the Login and Forgot Password pages
- Forms and input fields were used to collect user credentials <form>,<input>
- Buttons handled actions like Sign In and password reset.<button>
- placeholders improved clarity and accessibility.
- Anchor tags enabled navigation between related pages.<a>
- Semantic elements ensured a clean and readable layout.

Login & Forgot Password Page – CSS Styling

- Used CSS for layout, alignment, and spacing.
- Styled input fields and buttons for better usability.
- Applied consistent colors, fonts, and design across pages.
- Added hover and focus effects for improved user interaction.

```
body {
    background-color: #f4c9cf;
    height: 100vh;
}
```

```
.send_email:hover {
    background: #b92d70;
}
```

THANK YOU

K.THRISHALA
